

1. Introduction

Module **A-138 (MIXER)** is a **four channel mixer**, which can be used with either control voltages or audio signals.

Each of the four inputs has an attenuator, and there's a master attenuator, so that the mixer can be used at the end of the audio chain - ie. it can be used to interface directly with an external mixer, amplifier, etc..

The module can be supplied in two versions:

- **A-138 a:** potentiometers with linear response, so especially suitable for control voltage mixing.
- **A-138 b:** potentiometers with logarithmic response, so especially suitable for audio signal mixing.

From about middle of 2004 the module is equipped with an additional offset function for input 1. An internal jumper is used to decide if control input 1 works as a positive or negative DC offset generator provided that no plug is inserted into input 1.
